**Science Made Fun!**

*Science Experiences that Come to You™*

## *Science Fun for Kids!*

### What We Do

**We facilitate STEM fun for kids. Our programs provide an opportunity to expose kids, at an early age, to the amazing world of science and nature. Science is fun for kids and valued by parents and teachers. Our programs enhance the science curriculum and make it come to life through in school "field trips".**

**High Touch High Tech** continues to nurture budding young minds with our amazing preschool science activities. Our preschool science programs are magnificently designed for young children and encourage participants to expand their thinking and problem-solving skills. High Touch High Tech scientists are trained to actively listen to and talk with your preschoolers while encouraging their full participation in both discussion and experimentation.

*Our age appropriate and easy science programs include quiet and active periods as well as activities of varying length to address the attention span of your students.*

Offering science in preschool allows students to discover the many wonders of science! While engaging in our science activities for preschoolers, students create take-home experiments and receive a science certificate for their participation. All programs are totally safe and totally hands-on for each child.

### **Mixed Up Molecules©**

Little Turtle has chosen Mixed Up Molecules as their field trip! Activities will include experimenting with molecules as we create chemical reactions to inflate balloons, make space mud (a.k.a. Silly Putty), and sniff a smelly (vanilla) balloon.
